

Date: 17th of October 2024

CE TSOs & Swissgrid are pleased to provide the attached approval documents for the CE DA CCM for public consultation and the related explanatory note.

Following the ACER decision on the amended CCR determination (19/03/24), CE CCR was established and CE TSOs & Swissgrid are currently preparing the CE DA CCM submission for January 2025 and its subsequent implementation.

This CE DA CCM is in accordance with the Art 20 of CACM and details the Day-Ahead Operational process in the Central Europe CCR that will replace the current Core & Italy North Day Ahead processes.

The CE TSOs have published the CE DA CCM & explanatory note for Public Consultation on 17th October for a duration of one month.

CE TSOs expect feedback during the public consultation on all of the technical proposals for the CE DA CC process and in particular on the open questions detailed in the Explanatory note related to CH integration.

During the preparation of the CE DA CCM, CE TSOs have identified several topics that require further detailing, therefore an amendment of the CE DA CCM is foreseen in Art 23, Art 24, Art 25.

During the next months before the final submission TSOs will clarify certain topics/points and these might bring changes to the submitted version in January. This includes a more detailed assessment of the implementation deadline, which is preliminary set to June 2027 under the assumption that regulatory approval is obtained within 6 months following submission, as well a detailed justification for the use of ramping constraints by Terna.

Best regards,

CE Transmission System Operators & Swissgrid
